

NOXIOUS WEED

GENERAL INFORMATION

Thistles, Johnsongrass, Shattercane, Palmer Amaranth, and Common Waterhemp have been declared noxious weeds that adversely affect or threaten agricultural production in Maryland .

Regulations require that these weeds be controlled by anyone owning or managing land within the State.

Seeds from these noxious weeds are transported by wind, water and humans.

Weeds threaten the productive land of farmers and cause unsightly and unwanted problems in lawns and gardens of homeowners.

General control practices include mowing, cultivation and/or treatment with an approved herbicide.
